Guide for System Center Management Pack for Advanced Threat Analytics 1.7 (ATA 1.7)

This guide was written based on version 1.7.1.1 of the Management Pack for Advanced Threat Analytics 1.7 (ATA 1.7).

Guide History

Update this table for every release of the management pack guide. List the changes to the GUIDE, not the changes to the management pack. Changes to the management pack are listed in the “Changes in Version <version number>” section below.

Release Date	Changes
June 7 2017	Original release of this guide

Supported Configurations

This management pack requires System Center Operations Manager 2012 R2 or later. A dedicated Operations Manager management group is not required.

The following table details the supported configurations for the Management Pack for ATA 1.7:

Configuration	Support
Advanced Threat Analytics	1.7 1.7.1 1.7.2
Clustered servers	Not Tested
Agentless monitoring	Not Tested
Virtual environment	Yes

Prerequisites

The following requirements must be met to run this management pack:

- System Center Operations Manager 2012 R2 and later must be installed prior to running the management pack.
- The Windows Server 2008, 2008 R2, 2012, 2012 R2 or 2016 Operating System Discovery management pack must be installed. Use the respective pack to the operating system that ATA Center and Gateways are installed on.
- The ATA Center and Gateway application must be installed prior to the management pack discovering the ATA application components.
 - The ATA Configuration must have 1 directory synchronization candidate enabled. If not the discovery will fail to map the Center and gateways to the correct forest.

Files in this Management Pack

List all downloadable files that are part of the management pack .msi and indicate whether they are optional or required.

The Management Pack for ATA 1.7 includes the following files:

- Microsoft.AdvancedThreatAnalytics.1.7.mp

Management Pack Purpose

In this section:

- [Monitoring Scenarios](#)
- [How Health Rolls Up](#)

For details on the discoveries, rules, monitors, views, and reports contained in this Management pack, see [Appendix: Management Pack Contents](#).

Monitoring Scenarios

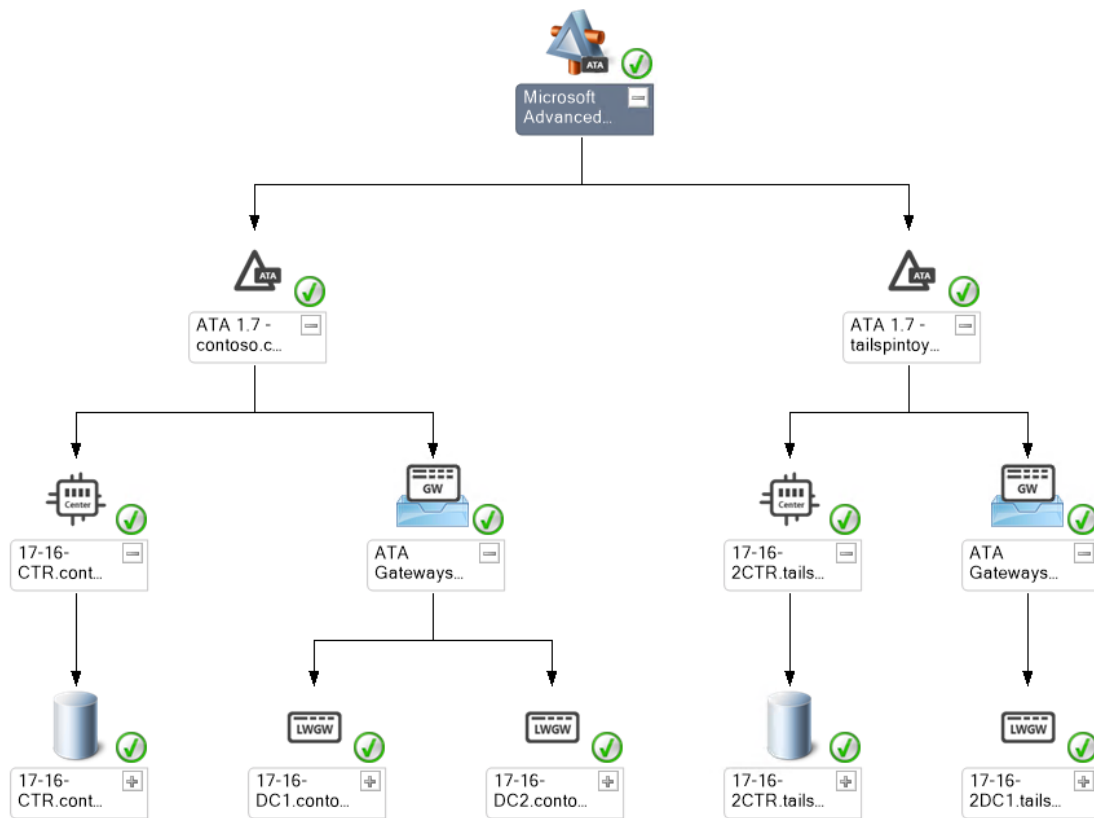

The following table describes the key monitoring scenarios that the management pack for Advanced Threat Analytics (ATA) enables.

Monitoring scenario	Description
ATA Center Service Status	Monitors whether the ATACenter service has stopped.
ATA Database Service Status	Monitors whether the MongoDB service has stopped.
ATA Gateway Service Status	Monitors whether the ATAGateway service has stopped.

Monitoring scenario	Description
ATA Gateway Updater Service Status	Monitors whether the ATAGatewayUpdater service has stopped.
ATA Center Performance Monitor	Monitors key performance counters on the ATA Center for indicators of issues. See https://docs.microsoft.com/en-us/advanced-threat-analytics/troubleshoot/troubleshooting-ata-using-perf-counters
ATA Gateway Performance Monitor	Monitors key performance counters on the ATA Gateway for indicators of issues. See https://docs.microsoft.com/en-us/advanced-threat-analytics/troubleshoot/troubleshooting-ata-using-perf-counters
ATA Health Alerts	Monitors ATA Health issues from the ATA Health Center
ATA Suspicious Activity Alerts	Monitors ATA Suspicious Activities from the ATA Suspicious Activity Timeline  Note By Default these rules are disabled

How Health Rolls Up

The following diagram shows how the health states of objects roll up in this management pack.
